

Installation instructions

i Refer to installation use and maintenance manual for more information.

Bipolar drive integrated with 2 phase step motor

- AC power Supply: 18 ÷ 100Vac
- DC Logic Supply: 24Vdc (mandatory and isolated)
- Phase current: up to 8.5 Arms (12 Apk)
- Chopper frequency: ultrasonic 40 kHz
- Steppless Control Technology (65536 position per turn)
- Protections: over-current, over-temperature, short circuit phase-phase motor and phase-ground
- Modbus or Canbus communication interfaces
- Digital inputs (opto-coupled)
- Digital outputs (opto-coupled and supplied from 24Vdc logic supply)
- Analog input (not isolated)
- Dimensions: Length (mm) x 135x86mm
- Connectors not included(refer to picture)
- IP protection: IP65
- Working temperature 5°C ÷ 40°C, storage temperature -25°C ÷ 55°C
- Humidity: 5% ÷ 85% not condensing

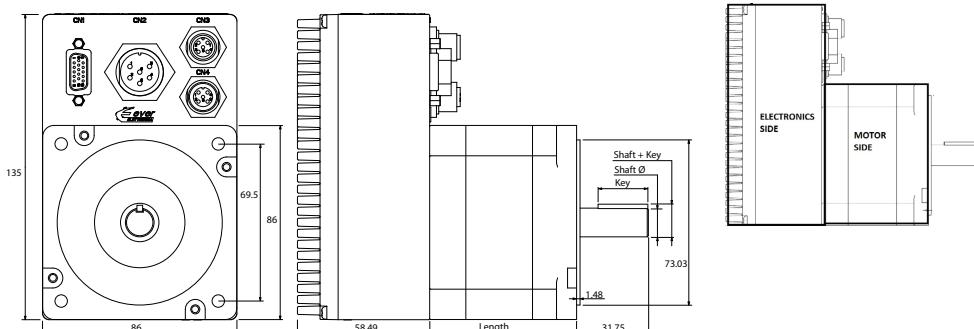

Mechanical data

Handle systems with care by taking them from the motor side and not from the electronics side.

Shaft axial load = 60 N max

Shaft radial load = 220 N max (on front shaft end)

Digital inputs connection

24 Vdc Differential PNP, NPN, Line Driver type or Single-Ended PNP type. F_{max} = 200 kHz.

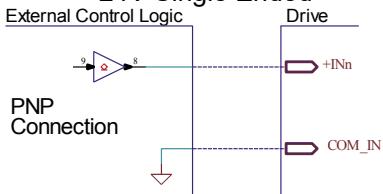

VERSION -----> y = 2

24V Differential

VERSION -----> y = 3

24V Single Ended

Digital outputs connection

Digital outputs are supplied from the 24 Vdc of logic supply.

B0_OUT0 and B0_OUT1

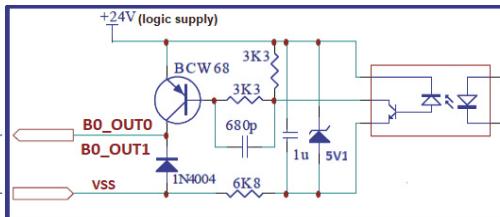

PNP with V_{out,max} = 24 Vdc, I_{out,max} = 100 mA, F_{max} = 250 kHz

External Control Logic

+24V PNP digital Input

PullDown (Optional)

B0_OUT2

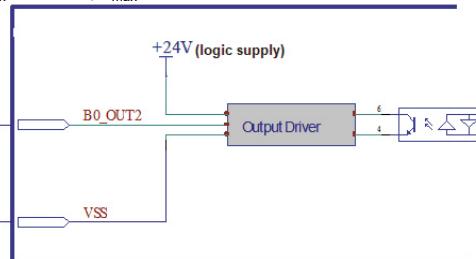

PNP with V_{out,max} = 24 Vdc, I_{out,max} = 500 mA, F_{max} = 1 kHz

External Control Logic

+24V PNP digital Input

PullDown (Optional)

VSS

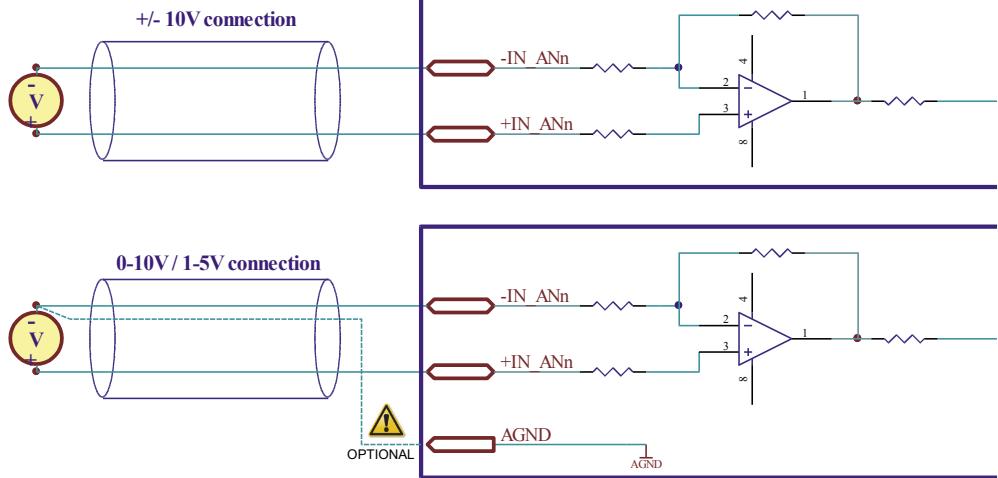

Analog inputs connection (only for version y=3)

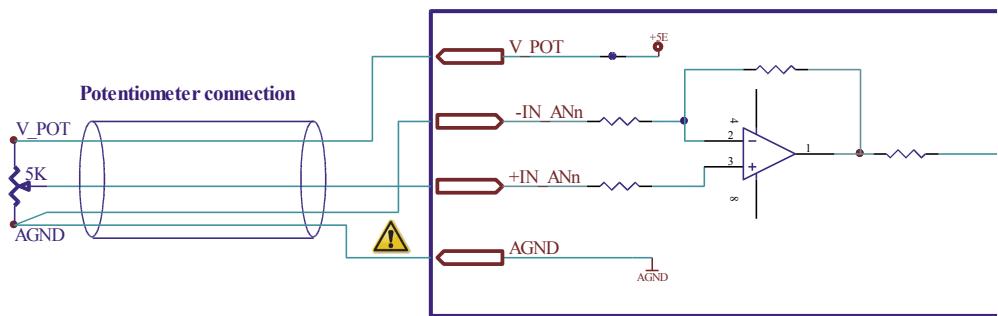

The resolution of the analog input depends from the type of the connection which could be defined by software: differential or potentiometer.

Differential connection

The connection from an external reference and AGND should be preceded by a thorough risk analysis on the machine/circuit in which the drive will be installed.

Potentiometer connection

AGND is internally in common with power ground, this is potentially dangerous. Take all necessary measures to avoid possible contacts in the final installation.

Verify the installation

- Check all connection: power supply and inputs/outputs.
- Make sure all settings right for the application.
- Make sure the power supply is suitable for the drive.
- If possible, remove the load from the motor shaft to avoid that wrong movements cause damage.
- Enable the current to the motor and verify the applied torque.
- Enable a movement of some steps and verify if the rotation direction is the desired one.
- Disconnect the power supply, connect the load on the motor and check the full functionality.

Analysis of malfunctions

DEFECT	CAUSE	ACTION
The external fuse to the drive burns.	May be due to a wrong connection of the power supply.	Adjust the connection and recover the fuse. Use a fuse suitable for the application.
Over temperature protection.	May be due to a duty cycle.	Increase the air flux and if it is possible chose a motor with higher torque at same current value.
Over current protection.	May be due to a short circuit on the motor power stage.	Shut down the power supply and check if the motor is damaged.
Noisy motor movement with vibrations.	May be caused due to a state of resonance.	Increase the resolution of the step angle and/or change the motor velocity to avoid resonance area.
The motor produce torque but doesn't rotate.	May be caused due to a wrong connection of the I/O's.	Check the connection of the I/O's.
